

Take another look at Allied!

With the increasing use of specialty phone services (VoIP, Digital, Cable Packages) getting your systems to communicate has become more difficult. You need solutions and Allied has you covered!

Introducing - Allied "Special OPS"

Allied Special OPS, Opportunity Partner Services, is a growing number of partner solutions being brought to our dealer family so you can provide more options for monitoring. Whether it's the homeowner without a landline or any type of commercial primary or back-up technology Special OPS ensures you will have quality choices to provide quality services.

Special OPS services provided are at competitively low rates and combined with the monthly invoice you already receive. No other invoices to manage and no third parties billing discussions. One stop shopping that is Special!

Allied Special OPS:

Wireless/GSM

AlarmNet - The AlarmNet network's reliability is assured with a state of the art network control center that houses dedicated communication services and hardware platforms. Hardware servers and communication paths are completely redundant, with hot back-up databases housed in two separate locations. If one system were to have a catastrophic event, the other system can take over without any service interruption. Both locations are equipped with battery and generator backup along with technical support 24 hours-a-day, seven days-a-week for uninterrupted service. This level of sophistication allows us to handle alarm communication for UL listed and critical high-line security installations.

Connect24 GSM - Since 1998, CONNECT 24 has been activating and administering cellular and GSM devices for security alarm dealers in the U.S. and Canada. All DSC GSM Communicators (TL-260GS, TL265GS, GS-2060, GS2065,GS3055-ICF, and GS3060) are activated and programmed via Connect 24's Web site or through Connect 24's VRU (Voice Response Unit).

GSM Universal Wireless Alarm Communicator GS3060

- Compatible with control panels that communicate using the Contact ID format
- Full event reporting
- Uses GPRS data channel for high-speed, reliable and low-cost communications to an IP receiver
- 4 on-board inputs
- 4 on-board outputs (open collector)
- SIM card (included)
- Activation and initialization via automated telephone activation system (VRU) or web-user interface provided by CONNECT 24™
- Monitors the panel's attempts to communicate to determine if GSM backup communications are necessary
- Compatible with Sur-Gard System II/III monitoring station receivers
- UL/ULC listed

Uplink - Proven Technology. Industry Expertise.

Wireless alarm services offers you and your customers superior protection when they need it most. As a substitute for landline alarm communicators or for use as a back-up to existing systems, Uplink remains on the job with a secure, reliable connection that transmits alarm events instantly, in the event of phone service disruption or if your customer has wireless-only service.

Uplink has been providing wireless alarm communications longer than anyone else, having deployed our first solution in 1996.

We make installing and activating a wireless alarm communicator easy. The only provider in the industry to facilitate web-based service activations and account management, we also feature on-call, live dealer assistance and extended hours technical support.

Superior Network Security

In addition to the technology expertise you receive from Uplink, you will benefit from Uplink's secure and reliable GSM wireless network and advanced services including:

Carrier grade connection to the GSM network for real-time transfer of signals to the 24/7/365 network operations center (NOC)

High speed communication network delivers signals to the NOC via high uptime servers with redundant backup power and communication

Servers immediately match the signal to your customer information and send the signal to your central station via the Internet or dial-up to the alarm receiver you select

Signals are sent in a format that is acceptable to most any central station, affording you the flexibility to choose any monitoring service or even use your swing lines

Get ready to offer your customers more with Uplink.

Video/Camera

ADPRO by Xtralis Perimeter Protection and Enterprise IP Security -

Xtralis provides a wide array of reliable perimeter protection and enterprise IP security solutions. Whether deployed as stand-alone products, in combination with existing security systems, or as a complete end-to-end solution, ADPRO by

Xtralis products can help you proactively identify threats before personnel, assets or operations are compromised.

With ADPRO by Xtralis perimeter protection and enterprise IP security solutions, you can better protect people and property by transforming your security program from reactive, forensic monitoring to proactive detection. We offer the industry's broadest range of:

Defense-grade perimeter protection

Passive infrared and video motion detection

Robust video and audio recording and transmission

Remote monitoring software

Energy-efficient video storage

Flexible and scalable IP access control

Integrated command and control software

Defense-grade Perimeter Protection and Event-based Video and Audio Transmission

True security requires proactive perimeter surveillance of the perimeter, reliable intrusion detection with minimal nuisance alarms, and immediate alarm notification. Xtralis offers award-winning, intelligent video detection, advanced PIR motion detectors with anti-vandal features, and event based video transmission with two-way audio, I/O and fastest post-event search.

Remote Video Monitoring

Our ADPRO VideoCentral Remote Site Video and Alarm Management Software is a powerful solution for remote site monitoring with real-time alarm

transmission to minimize delays in response time, intuitive alarm verification, and bandwidth-conserving transmission options to accommodate all transmission modes.

RSI Videofied - Videofied security systems deliver police when you need them - through video verified alarms.

We have an Upgrade Kit XT for existing installed intrusion alarms as well as a complete solution Videofied for new installations. Both are available with the GPRS cell notification for TOTALLY wireless video security anywhere. As an additional service, both can deliver the video of what caused the alarm to a cell phone. Secure yourself with faster police response and a video record of what caused the alarm. Police treat video verified alarms as a "Crime in Progress" and respond faster than for a routine alarm. Even in non-dispatch areas, police are still motivated to catch bad guys. Video verification makes law enforcement more efficient and provides greater security to the property owner.

The VIDEOFIED concept, with its world-exclusive technologies, marks a true revolution in property protection alarm systems, both for the private market (individual house or apartments) and for small businesses (commercial spaces and warehouses, etc.).

Quick and easy to install, and with no wires, the VIDEOFIED system, lets everyone benefit from the same state-of-the-art technology used by banks, jewelers and shopping malls - at a competitive price.

In the event of a false alarm, confirmed by video, the monitoring station can remotely neutralize the alarm, without bringing in a security team.

In the case of break-ins, the VIDEOFIED system relays the visual evidence of the crime to the central monitoring station, allowing law enforcement to act immediately in accordance with the law...

This also makes it a highly effective tool of dissuasion, as no thief wants to be identified on video! VIDEOFIED took Top Honors of the Security Industry Association's New Product Showcase. This prestigious competition held at the International Security Conference – ISC West - gathering the main actors of the security industry in Las Vegas from 28 till 30 March 2007.

VIDEOFIED was selected among hundred of innovative products by a jury composed of 21 professionals, representing various segments of the security industry. This award confirms the quality of the VIDEOFIED concept that allows everyone to benefit from the state-of-the-art technology in the field of security! http://www.videofied.com/

Xanboo - Xanboo provides an end-to-end technology platform that enables access and control of devices locally via a TV or PC, and remotely over the Internet via a mobile phone or PC.

Using Xanboo patented technology to connect from remote locations to a gateway in the home, users control and monitor devices from anywhere in the world via a standard web interface.

Xanboo's technology is market agnostic and provides a platform to a wide range of partners wishing to deliver services based upon video monitoring, device control, notification or data transmission, to any location with Internet access. Using the Xanboo Software Development Kit (the SDK), partners can provide a wide range of previously unavailable revenue generating services to their customers under their own brand. These services, customized to each partner's particular requirements, are being used in markets ranging from security and energy management to home healthcare.

Whether it's simply logging on from a remote location using your cell phone, or receiving critical alerts from devices in your home or business, you know that with Xanboo you have an industrial strength platform that will operate with the rock solid consistency you expect from a best-of-breed product.

The Xanboo platform is truly plug & play. There are no device or network configurations, router or port forwarding issues for you or your customers to deal with. Thus, it is not required to deliver systems in a pre- configured state, which means that packaging can be standardized and you can add more devices at any time by simply employing Xanboo's patented single button discovery installation technique.

The Xanboo system is designed for seamless operation with most of the protocols and security panels in popular use today, so you know you will always be able to chose the most appropriate and cost effective solution available.

Much of today's popular technology architecture for remote monitoring over the Internet was originally pioneered by Xanboo in the late 1990's and is described in the 8 patents that have been issued to Xanboo. http://www.xanboo.com/

Internet Monitoring

DSC Internet monitoring VIA the Surgard System III

T-Link Universal IP Alarm Communicator TL300

- Compatible with most control panels that use the Contact ID format
- Instant, always-on IP communication
- Works over local LAN/WAN network or the Internet
- 128-bit AES encryption (NIST approved)
- Supports DHCP (dynamic IP addresses)
- Low network bandwidth requirements
- Compatible with 10/100BaseT networks
- Reports events to 2 different receiver IP addresses
- Polling and hardware substitution protection
- 4 on-board programmable zone inputs and 2 programmable voltage outputs as stand-alone module
- Programmable through the PK5500 LCD keypad or T-Link Console software
- Software upgrades via network
- UL, CSFM and ULC Level 3/4/5 Listed

Service Package

Through our DICE automation system we can now offer a complete service package to our Dealer partners.

Preventative Maintenance

Allows users to schedule periodic service calls and service requests as they come due. Using dispatch codes to aid service personnel, a special setup system is provided to specify how many days before a preventive maintenance service request is due and generate a service ticket. Service history can be tracked by audited ticket number, account information, service personnel, dispatch reason, resolution information, and more.

Service Billing

The DICE Service Billing module automates the invoice creation and processing procedures for service related jobs.

Service Management

Service Management is a flexible system designed to help provide customers with the best service possible. Track service requests, from entry through dispatch, completion and billing. Parameters can be set to control processing on both a system-wide and individual operator basis. The Vehicle Maintenance portion of this program tracks days and mileage for oil changes, tire checks, tune-ups and general maintenance on service vehicles..

Service Scheduler

Service Scheduler breaks each day down into slots such as AM and PM, zip code, and panel type that can be assigned to technicians. Service department managers and supervisors can view assigned slots for all service personal or specific technicians.

Coming Soon

AES Intellinet - The leader in wireless mesh alarm communications for the fire and security industry.

AND GROWING!

Thank you for choosing Allied Central Services as your Alarm monitoring provider. Your business is greatly appreciated. If you have any further questions or comments please do not hesitate to contacts us.
